1.2 / 2

Percentage

60%

Grade

B

Feedback

The student successfully identified a computer as an electronic device and correctly noted its function to process input data. To provide a more comprehensive definition, it is essential to also include the critical steps of generating output and the ability to save data for future retrieval, as these are fundamental aspects of a computer's operation.

Strengths

- ✓ Correctly identified a computer as an electronic device.
- ✓ Understood that a computer processes data.
- ✓ Implied the handling of input data as part of its processing function.

Areas for Improvement

- Did not explicitly mention that a computer gives output after processing.
- Did not include the function of saving data for later use, which is a key capability.
- Could have been more explicit about 'taking input from user' rather than just 'Process input data'.
