Q.1. What is a Compiler?

Ans: A compiler is a software that converts high-level language into machine code. It translates the entire program at once and generates an executable file.

Q.2. Difference between Compiler and Interpreter.

Ans: A compiler translates the whole program at once, while an interpreter executes line by line. Compiler produces object code, but interpreter does not.

Q.3. What is a Token?

Ans: A token is the smallest meaningful unit in a program. It is generated during lexical analysis such as keywords, identifiers, and operators.

Q.4. What is Syntax Analysis?

Ans: Syntax analysis checks whether the program follows grammar rules. It also generates a parse tree for correct structure.

Q.5. What is a Symbol Table?

Ans: A symbol table is a data structure used by the compiler. It stores information about variables like name, type, and scope.

Q.6. What is Code Optimization?

Ans: Code optimization improves the performance of code. It makes the program faster and more efficient without changing output.

Name: Faizan Roll No. 225323

Q.1. What is a Compiler?

Ans: A compiler converts high-level code into machine language. It helps the computer understand and run programs.

Q.2. Difference between Compiler and Interpreter.

Ans: Compiler translates the whole program together. Interpreter executes code one line at a time.

Q.3. What is ~~Syntax~~ ~~Analysis~~ Token?

Ans: A token is a small unit of a program. It can be a keyword, identifier, or operator.

Q.4. What is Syntax Analysis?

Ans: Syntax analysis checks the structure of the program. It detects grammar errors.

Q.5. What is a Symbol Table?

Ans: Symbol table stores information about variables. It helps in different phases of compiler.

Q.5. What is Code Optimization?

Ans: Code Optimization makes the program better. It reduces time and memory usage.

Name: Ali Roll no. 225336

Q.1. What is a Compiler?

Ans: A compiler changes code into another language. It helps run the program.

Q.2. Difference between Compiler and Interpreter?

Ans: Compiler works once. Interpreter works line by line.

Q.3. What is a Token?

Ans: Token is part of code. It is small unit.

Q.4. What is Syntax Analysis?

Ans: Syntan analysis checks structure of a code. It finds tokens in the code.

Q.5. What is a Symbol Table?

Ans: Symbol table stores names. It is used in compiler.

Q.6. What is Code Optimization?

Ans: Code optimization makes program good and fast. It decrease the usage of memory.
